

WIOA NEWS

CTE

This academic semester marks the introduction of our **Information Technology** course. The Information Technology course is a two year series that falls into the **Creative Path**. Students will earn their **Google Suite Certification** and **CompTIA A+ IT Certification**, which is a certification needed for entry level IT careers. Our Nursing students have begun the final course in their two year series. Students will complete in-person clinical hours as part of the California requirement to become **Certified Nursing Aides**. This will allow them to enter the Health Profession post-high school graduation.

Events

This academic semester we are introducing our **Virtual Mentorship Program**. Students will participate in a four week course worth 2.5 elective credits. Students will be provided with mentorship in academics, social emotional skills, and much more. A **Helping Path** virtual Career Chat was held for our students, in which they were able to ask questions and learn about the profession of a **Marriage and Family Therapist**. Students were also able to participate in a second **Helping Path** event. They were given the opportunity to earn their **Food Handlers Certification** which is essential for any students looking to work in the culinary industry. This certification was provided at no cost to the students.

Student Groups

This semester we were able to start a new **Gaming Group**. The Gaming Group meets every Wednesday during lunch. It provides a safe environment for students to participate in peer centered activities. In addition to interacting with other students via gaming, students are also encouraged to take part in various community service opportunities fulfilling WIOA element 6: **promoting positive, social civic behaviors**.

Principles of IT A VIRTUAL
CREATIVE PATH

When: Tuesday & Thursdays 4pm-5:30pm
Starts: January 26th, 2021
Ends: May 14, 2021

Principles of IT A Virtual: Course Information
This course begins by covering basic computer hardware. It explores careers in the information technology sector. Students use the Google Suite to learn to work with productivity applications such as documents, spreadsheets, presentation software, and cloud-drive management. The course ends with a study of the technology that enables the Internet.
